

HTTP and Requests

Estimated time needed: 15 minutes

Objectives

After completing this lab you will be able to:

- Understand HTTP
- Handle the HTTP Requests

Table of Contents

- Overview of HTTP
 - Uniform Resource Locator:URL
 - Request
 - Response
- Requests in Python
 - Get request with URL Parameters
 - Post Requests

Overview of HTTP

When you, the **client**, use a web page your browser sends an **HTTP** request to the **server** where the page is hosted. The server tries to find the desired **resource** by default "index.html". If your request is successful, the server will send the object to the client in an **HTTP response**; this includes information like the type of the **resource**, the length of the **resource**, and other information.

The figure below represents the process; the circle on the left represents the client, the circle on the right represents the Web server. The table under the Web server represents a list of resources stored in the web server. In this case an **HTML** file, **png** image, and **txt** file .

The **HTTP** protocol allows you to send and receive information through the web including webpages, images, and other web resources. In this lab, we will provide an overview of the Requests library for interacting with the **HTTP** protocol. </p>
